- *First Year:* CS 2110 Software Development Methods, CS 2150 Program and Data Representation, CS 2102 Discrete Math, ECE 2330 Digital Logic Design
- *Second Year:* CS 3102 Theory of Computation, CS 4102 Algorithms, CS 4720 Mobile Application Development

Projects

Animal Crossing Music Player

October 2018 / February 2020

- A java program that functions as an hourly radio player by playing music based on the user's time
- Created for CavHack Hackathon, an 8-hour competition, to be judged in the java category
- Implemented threading, java swing GUI, file input and reading, and sound functionality
- Awarded runner up in creative category at the hackathon
- Reworked in February 2020 to be a bot using node.js

Media Assistant Discord Bot

March 2020

- A project created and submitted for the HooHacks 2020 hackathon
- A Discord Bot that acts as a watchlist for animated media using typed user commands
- Implemented using Node.js as well as extensive use of Git for project management
- Uses a Mongo DB database to store user information

Mcolawyer.com

May 2020

- A business website designed for the Law Office of Mark C. Orndorff
- Made using HTML5 and CSS3 from scratch as well as deployment using GitHub and Netlify
